

Comments to the cypressAllure project

- There is a typo in the error message in the login.test.ts file when testing 'login with wrong email format credentials read data from fixture'. "Invalid email address" is necessary.

```
32     })
33     it('login with wrong email format credentials read data from fixture', function () {
34         loginPage.login(this.data.invalid_credentials.wrong_email_format.emailId, this.data.
35             invalid_credentials.wrong_email_format.password)
36         loginPage.validateLoginError('Invalid email addresssssss.')
37     })
```

- The myAccount.test.ts file contains an import login page that is not used in the test, it can be omitted.

```
1     import { loginPage } from "../pages/loginPage";
2
3     describe('My Account Functionality', () => {
4         beforeEach(() => {
5             cy.visit('https://google.com');
6             //loginPage.launchApplication()
7         })
8         it('Sample Test', () => {
9             console.log("This is a sample test")
10        })
11    })
```

- Perhaps the verifications such as should('have text', 'My account') and should('be.visible') should be in the login.test.ts file itself and not in MyAccountPage.
- You can add devDependencies to the README.md file
- When running the script:

```
"report": "npx allure generate reports/ui/allure-results --clean -o reports/ui/allure-report && allure open reports/ui/allure-report"
```

creates an allure-report with empty values.
